

Heterogeneous ground-constraint diagnostics

Frozen STK opportunities · 4 libraries / 2 source groups · TRAIN development only

(a) Input graph changes

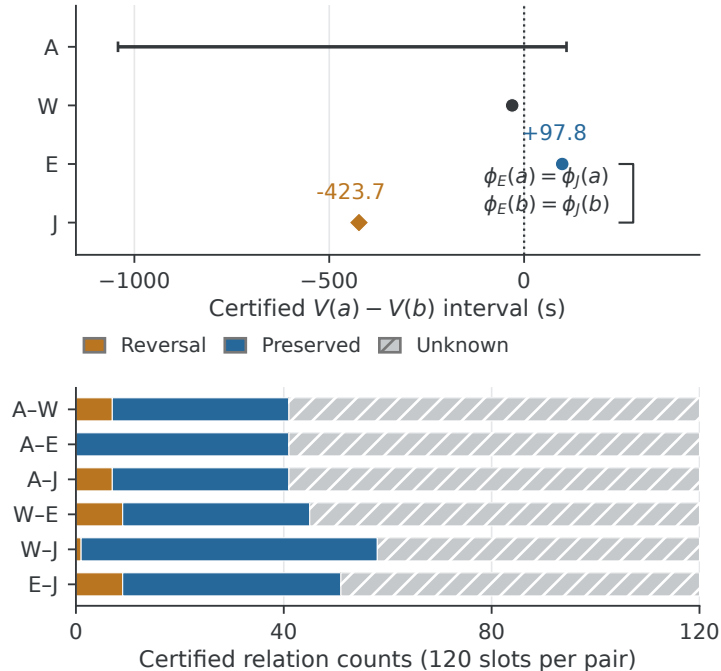

A: both groups 340 s; W/E: one group 1200 s; J: both 1200 s. Satellite gap = 150 s; vertices and rewards fixed.

Witness: CP-AU-r000:q008:d16 ($|P|=64$). Four-side strict: 41/120; joint-only reversals: 0.

Cap 128: 40/40 queries unknown on all 4 sides. Interaction I: 2 nonzero / 40 exact zero / 78 unknown.

Bounds refer to the same restricted P/F/X. Reference* uses offline strict certificates (Degree fallback); no LLM calls. Execution dots omit exact-zero pairs; = counts retain all states.

(b) Same representation, opposite decision

(c) Execution reward changes
